

Making Your Own Pinwheel

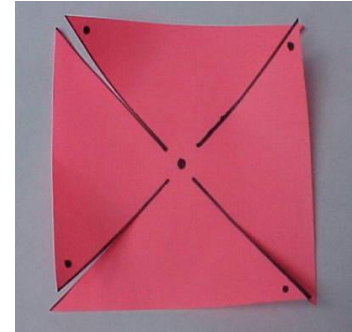

Step 1. To get started making your own pinwheel, cut a 4-inch x 4-inch square out of a piece of paper.

Step 2. Draw diagonal lines across your square to join up the corners. Then, mark the center of the square with a dot and draw an additional dot at each of the corners.

Step 3. Use a pair of scissors to cut along the diagonal lines. Then, use a hole punch or punch a hole through each of the dots.

Step 4. Line the dots on the outer edge of your pinwheel up with the dot in the center. Push a tack through the dots to hold everything together. Then, push the pin into the side of a pencil eraser or straw. Your pinwheel is now ready to use!
