

Are We Closing the Race/Ethnicity Gap in ASD Identification and Outcome?

Wednesday, April 28, 2021

1:00-2:00 p.m. • Online via Zoom • Register for Zoom link

Rob Fitzgerald, Ph.D., MPH
Assistant Professor of Psychiatry
Washington University School of Medicine

Early identification of autism spectrum disorder (ASD) is key to improved outcomes in language, social, and cognitive skills. And though it is now possible to identify ASD in children as young as 18 months, African American children with ASD experience significant delays in diagnosis and access to treatment services. In this talk, Dr. Fitzgerald will discuss research on the timing of autism diagnosis among African American children through his work in the Autism and Developmental Disabilities Monitoring (ADDM) Network and Study to Explore Early Development (SEED) Phase 3.
