

ARE YOU A PARENT?

the Child Studies Group at Vanderbilt
needs your help!

Child
Studies
Group

-
- Play learning games and learn about child development!
 - Help us understand how children think and learn!
 - Go home with a toy or book - and sometimes a gift card!

Questions we are currently asking in some of our play-based studies:

Infants

Do infants understand when we talk about things they can't see? How do early experiences support the growth of infants' motor skills?

Toddlers

What can young children learn from playing with toys or watching videos? Why are some children more interested than others in how things work?

Preschoolers

How can parents make the most of reading books with their children? How do young children learn about numbers?

School Aged

What do children understand about invisible things, like atoms? How do children decide what is true and what is not? How do learning disabilities affect development?

Adolescents

How similar are children's views of the world to those of their parents? How are adolescents affected by stress and anxiety?
