

Do you have a child with autism spectrum disorder between 8 and 14 years old?

PARTICIPATE IN OUR RESEARCH STUDY!

Who are we?

We are researchers at Vanderbilt University studying how **nonverbal or minimally verbal** children with autism spectrum disorder process different kinds of sounds in their environment.

What happens in the study?

Your child will be asked to listen to sounds while watching silent cartoons with an EEG cap on. The EEG cap has 128 sensors that are made up of soft sponges that measure brain waves. There will be questionnaires for the caregiver. This study can be completed in only one or two sessions.

VANDERBILT  UNIVERSITY
MEDICAL CENTER

You will be reimbursed \$50 for your time!

If interested, please contact Allison Whitten at bodfishlab@vanderbilt.edu or call (615) 936-4092
