

Infant Learning Lab

The Infant Learning Lab at Vanderbilt University is recruiting parents with infants between 2 and 24 months of age to participate in research studies on how babies learn about objects. We hope to find out how babies learn through exploring their surroundings and observing other people. Your baby or toddler would sit on your lap while playing with some of our toys, and visits usually take about 30 minutes. You can park in our reserved parking space during your visit, and your baby will receive a small toy as a thank you gift.
