

Infants' understanding of speech about the absent

We invite 11- to 14-month-old babies to participate in a study on infant language development run in the language development lab at Vanderbilt University. This research is being conducted by Dr. Maria Osina and Dr. Megan Saylor. We are interested in babies' ability to understand talk about absent things. Participation involves a one hour visit to our lab. Your baby will receive a small present for taking part in the study. If you are interested and your child is between 11 and 14 months, please, contact us at 615-343-8721, from 9:00 a.m. to 4:00 p.m., or e-mail at maria.a.osina@vanderbilt.edu.
