We are looking for typically developing children to participate in a study to see if a new e-health application designed for parents and professionals may be useful in assessing risk for autism.

Participants needed:
Children between 18 to 36 months

What the study involves:
- Up to two visits to Vanderbilt, lasting 1-4 hours
- You (parent) will be asked to answer questions about your child
- Your child will do several play-based activities with a pediatric provider helping us test the e-health application
- Your child will receive a developmental evaluation with a clinical psychologist. You will receive a summary report of the results.

Compensation:
Parent will receive a $50 gift card to Amazon.com at the visit.

Location/Parking:
The sessions are held at the TRIAD Research lab at the Village at Vanderbilt, so parking is conveniently located below the building.
