

## Understanding Effects of Amplification on Preschoolers with Autism

Date of IRB Approval: 06/05/2019

Would you like to help us learn more about the benefits of amplification for young children with autism?

We need your help if:

- Your child is 5-18 years old and has a diagnosis of autism spectrum disorder (ASD).
- Your child has delayed spoken language.
- You would like to learn more about your young child's development.

All participants attend one, four hour visit at Vanderbilt University Medical Center. Children will also receive standardized developmental testing and psychological assessment for autism at no cost.

Participants will be compensated!
