

# Laboratory for Affective Sensory Research

Our current study aims to understand how connections between the brain and the rest of the body relate to sensory issues and anxiety in people with autism.

You may be eligible if you (or your child):

- Are between 8-60 years of age
- Are willing to have an MRI brain scan and EEG
- And either have or do not have an autism spectrum diagnosis

Participants will be paid \$15 an hour and will also receive a \$25 bonus for completion of all questionnaires.
