

Study on Language Development in Young Adults with Fragile X syndrome

VANDERBILT KENNEDY CENTER

Date of IRB Approval: 12/19/2018

Do you have a son or daughter with Fragile X syndrome in or entering the last year of high school?

Help us learn more about how certain abilities, experiences, and biology affect language abilities in adulthood for both males and females with fragile X syndrome.

Participants will take part in four assessment visits over a 3-year period. Two visits will be completed at one of our three study sites, and two will be completed from home. Each assessment may vary and will require direct participation from either you or your son/daughter. We will also ask you to provide some additional information about your son/daughter.

Travel costs will be reimbursed, and families will receive a \$200 honorarium for completing all parts of the study.
