

Volunteer for Autism Research at Vanderbilt

We are looking for individuals ages 15 - 45 years old for a study involving a new medication for Autism Spectrum Disorder (ASD).

The study lasts approximately 24 weeks.

Patients will be screened to see if they meet study criteria.

If enrolled, participants will take a medication once daily. The medication may be one of two doses of active study drug or a placebo.

Throughout the study, participants and their study partner will complete 10 in-person visits.

Visits may include behavioral and cognitive assessments, blood or urine samples, or physical exams.

All study procedures and medications will be provided at no cost to you.

Your time will be compensated.
